

<b>Category</b> (科目区分)	Research subject		
<b>Course Title</b> (授業科目名)	Immunolgy and Microbiology		
<b>Instructors</b> (担当者名)	Takashi Ebihara	<b>Academic Year</b> (配当年次)	2,3
<b>Required Course / Elective Course</b> (必修/選択)	Elective Course	<b>Credits</b> (単位数)	15
<b>Class Format</b> (授業形態)	Experimental Practice		
<b>Schedule</b> (開講期間)	TBD		
<b>Class Date/Period</b> (開講曜日・時間)	TBD		
<b>Course Outline/ Course Objectives</b> (授業の概要・到達目標)			
<p>Aims: To learn skills for scientific research listed below.</p> <ol style="list-style-type: none"> <li>1. Updating knowledge in the research field to find unknown interesting questions</li> <li>2. Planning experiments to adress the questions</li> <li>3. Analyzing the data</li> <li>4. Summarizing and presenting the data</li> <li>5. Writing matuscripts based on the data</li> </ol> <p>Couse Outline: Our lab is focussing on innate lymphoid cells (ILCs) that contribute to various disease pathogenesis including allergy, virus infections, bacterial infections, and tumor implanted models. To find novel significance of ILCs in the disease progression, we generate genetically-modified mice, analyze ILCs in the disease models, perform omics analysis such as RNA-seq, Chip-seq, ATAC-seq, and RIP-seq. Students are expected to learn these cell biological methods. Final goal of this course is to publish new findings as manuscripts.</p>
